PRODUCTION PROCESSING & MOUNTING

Micar developed a new business unit and presents PPM with our own operative centers fully dedicated to in-house production, processing and mounting of new product lines.

Based on the experience gained in over fifty years of continuous research of innovative solutions, **Micar faces a new challenge and invests in technology and know-how.**

Through PPM business unit - **Production, Processing & Mounting** - Micar is able to offer new products and services, complementing our traditional commercial vocation with the **skills typical of production.**

PPM consists in **advanced operative units**, equipped

with the latest available technologies and perfectly organized to reach the best efficiency.

The entire project is supported by our **excellent human resources**. We operate with the **utmost attention to every detail**: dynamic and highly skilled teams are our most important investment.

"Micar have laid a solid foundation for growth in increasingly close cooperation with our customers".

BELT Center

Production and distribution of conveyor belts and special belts

Our BELT center focuses technology and know-how to meet the specific needs of advanced handling

Mizar invested in BELT center providing it with all the most **modern equipment**: we are able to perform **any kind of processing** and **special execution**.

A **highly specialized team** is able to create **customized products** with the utmost care during every stage of production.

For the realization of our items are used **certified materials of the highest quality**.

Flexible organization and a **large stock** of materials allow us to realize promptly both **individual products** and **series production** starting from the **specifications provided by our client**.

A meticulous **quality control** guarantees finally excellent standard and **high reliability** for all our products.
